

Jewel caster

Description

Our design philosophy is that the castor should never be an afterthought. In fact the castor should be the centre of attention as its performance will dictate the success or failure of any portable furniture design.

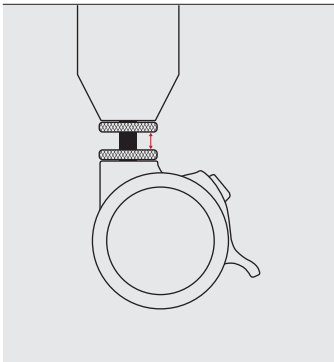

Unlike our competitors, Muzo designed its own castor. We wanted to put a little emotion into castor design - and a great deal of our research.

Key feature

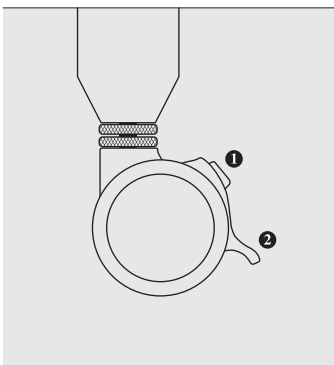

The key patent-pending feature behind Jewel is the axis-point locking system, which enables mobile products to behave like fixed products as no axis rotation is possible when the brake is engaged.

- ❶ The axis locks preventing twisting
- ❷ The wheel locks preventing rolling

Levelling

50 mm of levelling for uneven floors and stability for all types.

Design

To prevent damage to the top of your footwear, you can lock and unlock from the top of the pad by simply applying pressure.

- ❶ Unlock
- ❷ Lock
