TAKING VERSATILITY TO NEW DIMENSIONS

How we took our celebrated Kite folding table system and transformed it into an unrivaled flexible fixed frame table and workstation.

Why?

There is no question that Kite is the world leader when it comes to durable folding, nesting, and reconfigurable tables. Fans of Kite worldwide have approached Muzo with various requirements that focus primarily on the success of our design's durability, shapes, and sizes without the need for a folding function. Lead designer Mike Prendergast got to work creating a fixed frame system that not only enhances these features but also offers complete freedom to customize by specifying almost any height, shape, and top imaginable.

Assorted-height tables with a variety of surfaces have become an essential component of modern flexible workspaces and classrooms, creating a

dynamic and adaptable space for all users. These tables create options designed to accommodate different learning and working styles, as well as the diverse needs of individuals. Incorporating different heights and shapes of tables allows for greater flexibility in group work and encourages creativity and productivity. Additionally, Assorted-height tables can help facilitate better communication and interaction between individuals, as they can easily collaborate in a more relaxed and comfortable setting. Creating more options promotes inclusivity and accessibility as it allows people of all ages and abilities to participate and contribute to the learning or work environment.

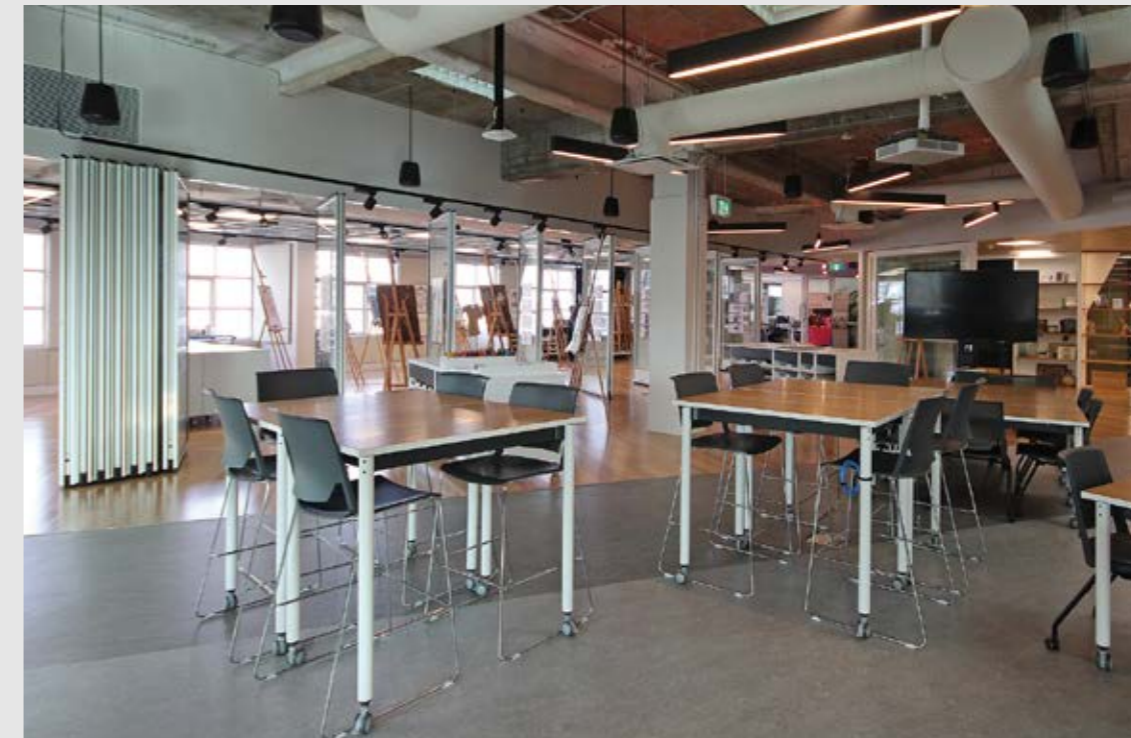

Darren Buttle
Muzo

“Muzo helps Architects execute their table design and learning space vision. The architect can decide the height, size, shape and color of the Versatilis tables without any concerns about durability or extended lead times”

—HOW IT WORKS

THE ADVANTAGES OF VERSATILIS

There are 4 key choices with Versatilis. The table shape, the size, the height, and the top. You dream it, we build it.

O1 - SHAPE

Choose a Muzo table shape or design your own.

O2 - SIZE

Choose the size of your shape.

O3 - HEIGHT

Choose the height of your table top from our list or choose any height between 14 and 41 high.

O4 - TOPS

Choose from a variety of tops such as butcher block, veneer, solid wood tops, thicker laminates, Lino-covered tops, and even metal tops.

—FEATURES

VARIED HEIGHTS

With no limitations, we can accommodate different learning and working styles, as well as the diverse needs of individuals.

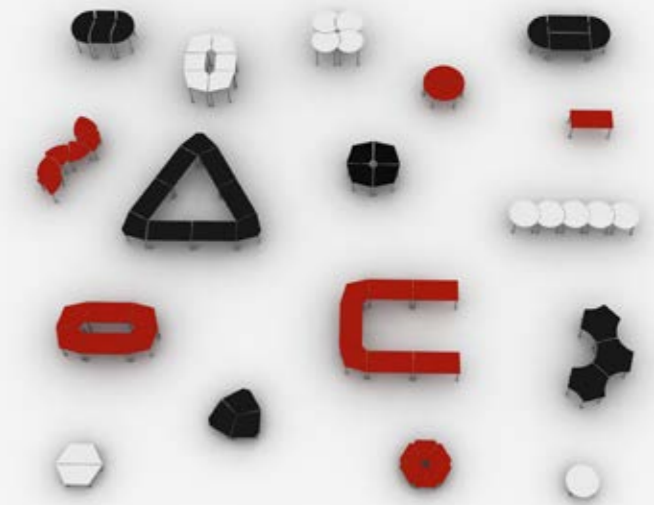

LEG COLORS

We have our own in-house powder coating facility and proudly partnered with Sherwin-Williams to provide sustainable color choices.

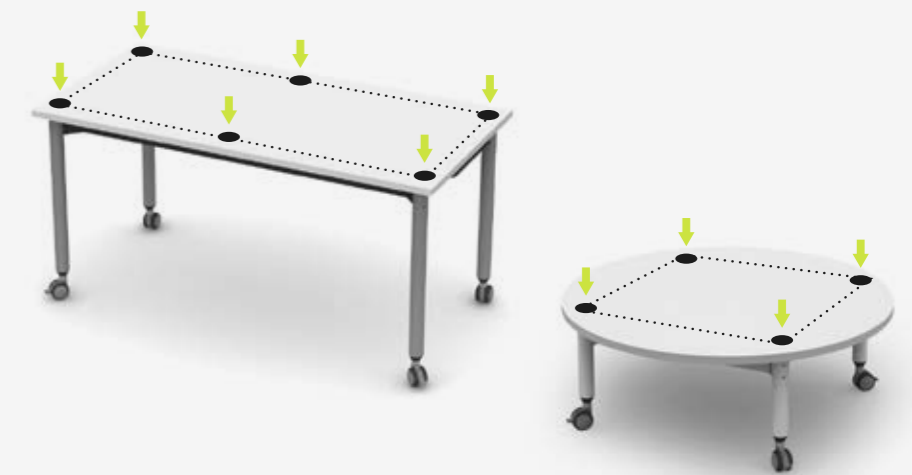

CUSTOM SHAPES

A vast amount of standard shapes are available to suit any activity and utilize any non-standard room sizes and wall angles. We can also create custom shapes based on themes or creative projects.

DURABILITY

The unique, perimeter-supported underframe provides essential safety, rigidity, and durability. (Unlike I-frame folding, centrally supported tables which are prone to tipping if you perch on a corner) All corners are further supported by a 50mm diameter leg which makes Versatilis an exceptionally robust table that is capable of bearing beyond 300kg in weight.

A CASTER LIKE NO OTHER

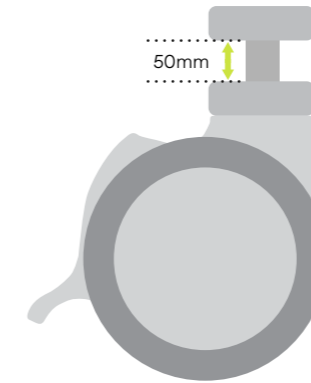

Our design philosophy is that the caster should never be an afterthought. In fact, the caster should be the center of attention as its performance will dictate the success or failure of any portable furniture design.

The key feature behind the Muzo caster is the axis-point locking system, which locks the wheel rotation and the side-to-side axis rotation which enables mobile furniture to behave like fixed furniture when locked.

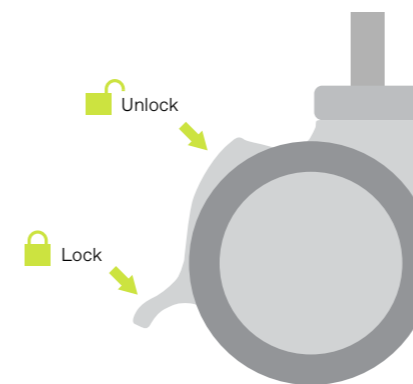

LEVELLING

No rotation is possible when the dual locking brake is engaged so Versatilis tables are always as stable as fixed furniture. The 50mm of leveling copes with any uneven floors and further stability is ensured on all floor surfaces thanks to the all-terrain anti-shock wheels.

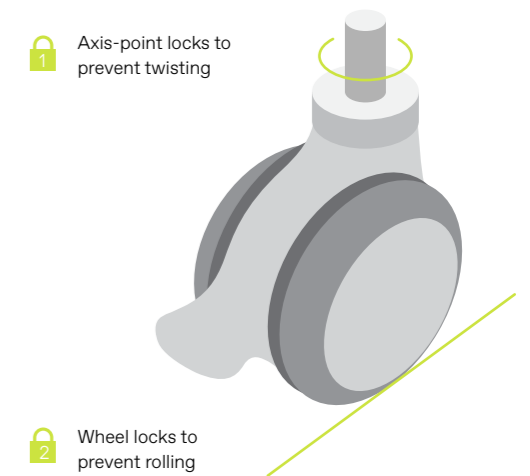

DAMAGE PREVENTION

To prevent damage to the top of your footwear, you can lock and unlock from the top of the caster by simply applying pressure.

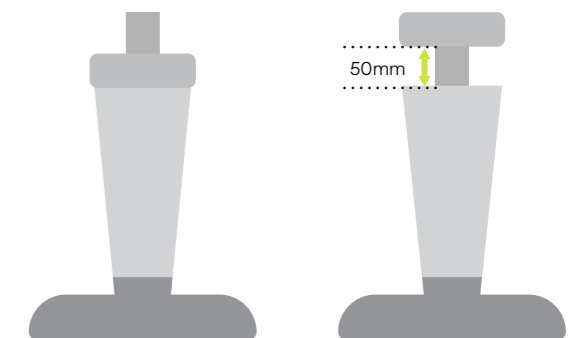

NO ROTATION

The key, unique design feature behind the caster is the axis-point locking system, which locks both the wheel rotation and the axis rotation enabling mobile furniture to behave like fixed furniture. Competing tables wobble due to axis rotation.

FOOT OPTION

If you would like a foot instead of a caster we have that option and if you change your mind after installation you can interchange the foot and caster with no tools required. Height remains the same.

VERSATILIS STYLES

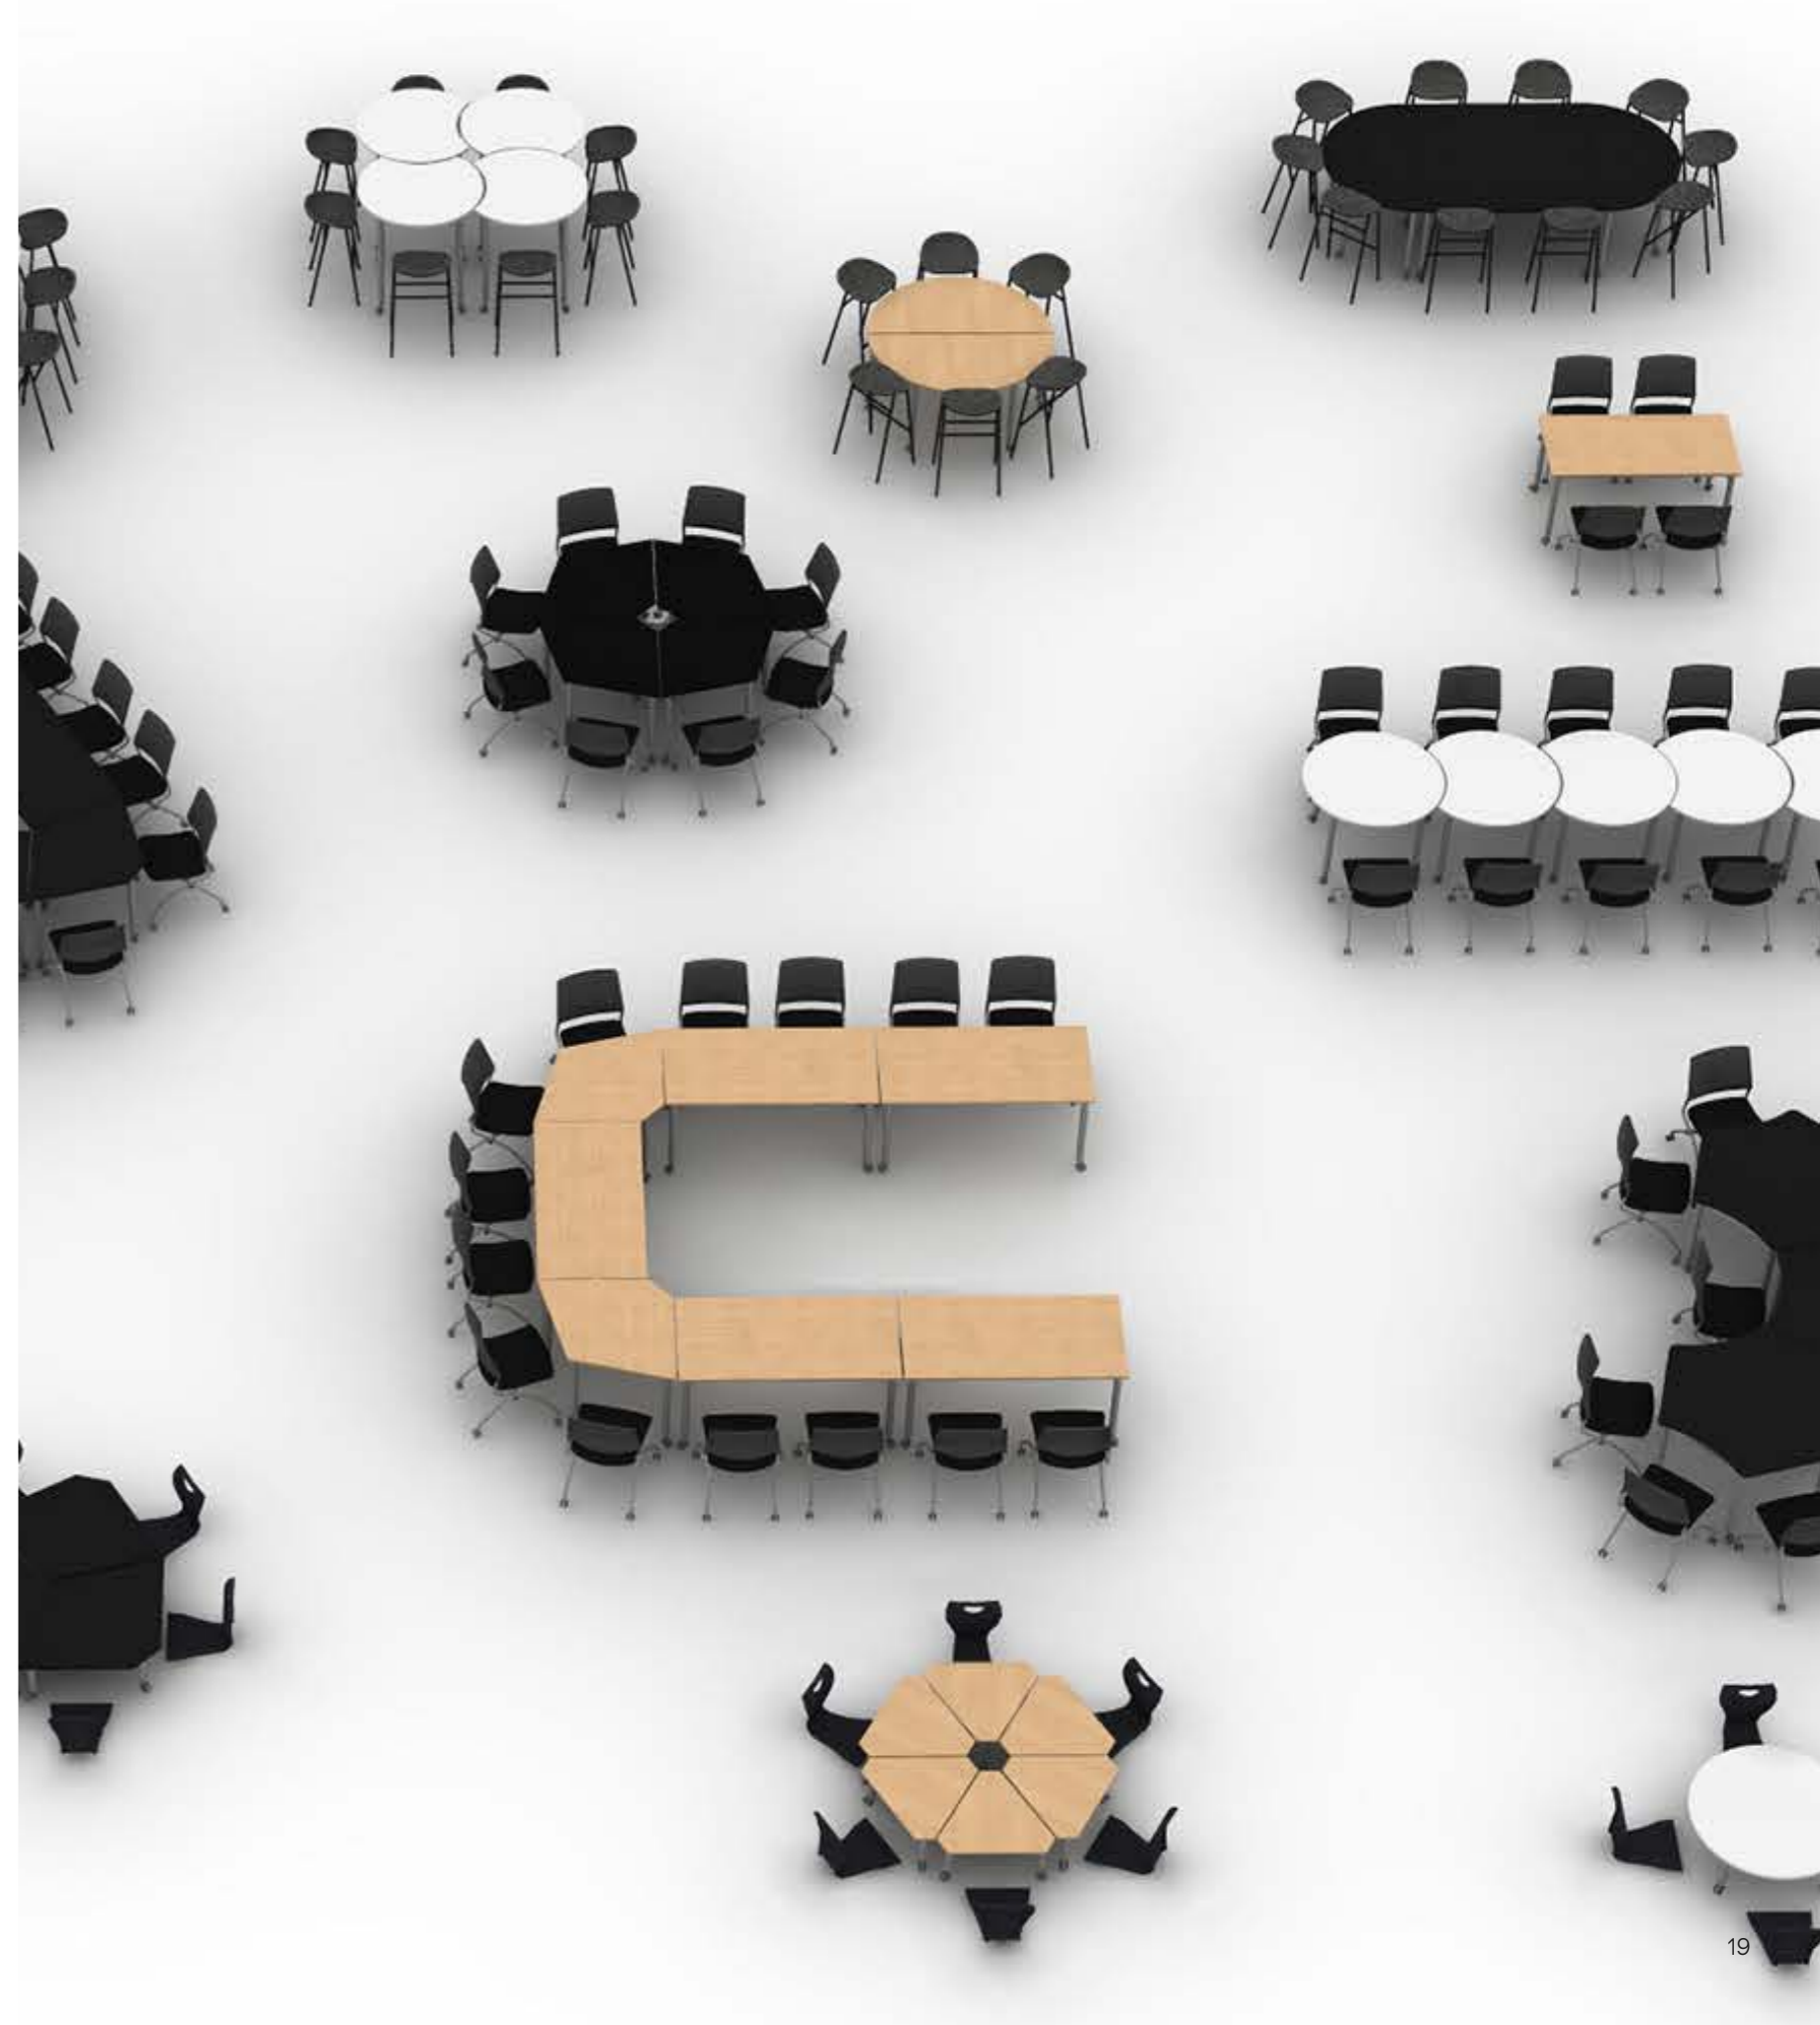

Here at Muzo we have customized Versatilis to make a range of products to suit specific tasks or spaces to make it easier for customers to see the different ways one product line can be specified to meet multiple needs, wants, and requirements.

—STYLES

VERSATILIS ORIGINALS

Classrooms, offices, libraries,
reception areas.

The wide range of shapes, heights and sizes allow typical spaces to be re-purposed as and when required. With a solid frame supporting every side of every top, the table can withstand the pressures of long-term everyday use.

BOT BUILDER

Stem learning, science labs,
maker space.

Inspired by Lego, our Bot Builder workstations are designed to facilitate hands-on, collaborative, and creative activities. The lipped edge table top keeps any tools and small physical components contained within the work area preventing the loss or damage of anything falling from the edge of the surface.

VERSATILIS MEDIA

What makes these
tables different?

Unlike competing tables, Versatilis media tables have the following advantages:

1. A wide range of shapes & custom possibilities to suit the room size or your required seating positions.
2. Age appropriate with fixed heights 15", 25", 27", 29", 36" & 41" or height adjustable legs.
3. Built-in power and untethered power options so you can locate your table wherever it is required.
4. Unrivalled stability & durability with either leveling feet or the unique Jewel Casters.
5. Stunning powder coat paint & laminate color options to make your media room pop

—POWER

CABLELESS POWER

How we took our celebrated Kite folding table system and transformed it into an unrivaled flexible fixed frame table and workstation.

Muzo has partnered up with OE Electrics so we can offer a table system that provides users with complete freedom from fixed wall sockets and trailing power cables.

Technology plays a vital role in all manner of daily tasks, and for any space to be really adaptable it needs to provide people with the ability to take their power sources with them.

Introducing Qpac. A complete electrical system that uses click & connect modules and patented battery technology. With 240Wh, our powerful Qpac battery has enough juice to power one table or space for an entire day.

Supercharged Kite tables offer more flexibility than ever before. Simply take a battery, clip it to your table, wheel it into place and you're all set.

Why embrace DC battery power technology?

- Reduce your electric bill
- DC Equipment is far more efficient than AC
- Real Estate cost reductions
- Reduce your facility labor costs
- Improve safety
- Create a new mobile work culture

“We found substantial savings are made by reducing energy consumption throughout the day and charging the batteries overnight when energy rates are lower.”

JUICE TREE

Features a removable Qpac battery which negates the need for dangerous loose power cables. So, no more running extension cables across floors from the wall or scrambling on the floor connecting to floor boxes. This is a self-contained, mobile, safe charging unit. Designed specifically to work with 4 Kite tables and sits neatly in the center of the group but can also be used as an independent source of battery power.

RECHARGE STATION

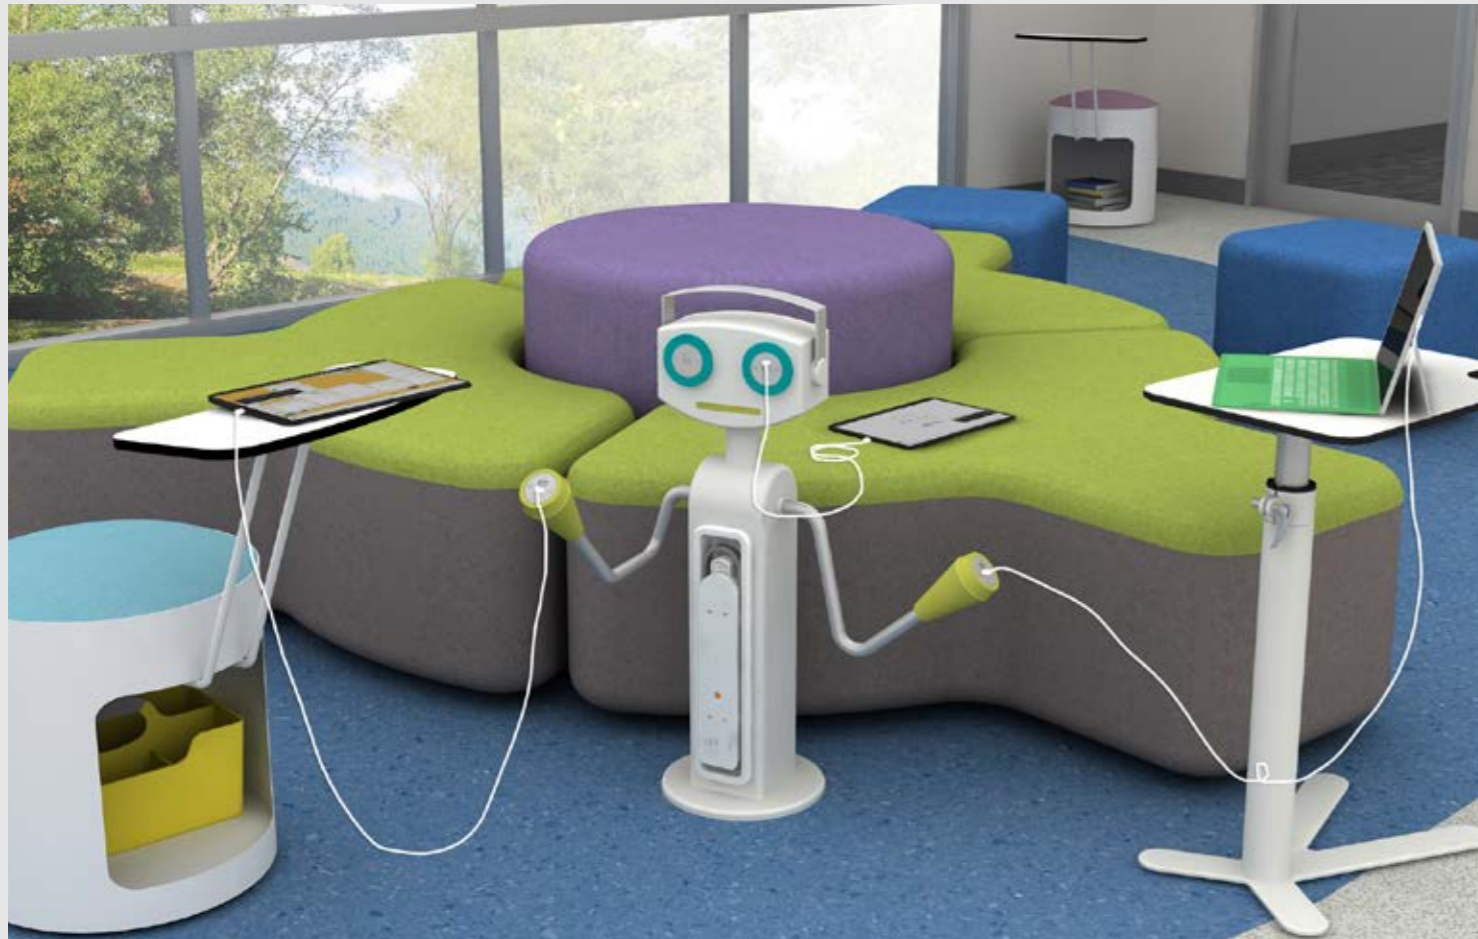

A mobile unit that allows you to charge up to 12 Qpacs at once. Simply click the Qpacs into place, connect the station to a mains power outlet and the recharge process begins. It's especially handy at the end of the day to collect a bunch of Qpacs and leave them on an overnight charge. As a robust, mobile station, it's also handy to roll the unit into a location that makes the charged Qpacs visibly and tangibly accessible to anyone and also acts as a storage unit when finished.

JUICE BOT

Juice Bot houses a Qpac battery, Bluetooth speaker and facilitates power in multiple directions thanks to the flexible arms. There are 5 USB/USBC connection points in the eyes, hands, and tummy allowing shared power by a cluster of Versatilis tables or breakout areas.

QPAC

A mobile unit that allows you to charge up to 12 Qpacs at once. Simply click the Qpacs into place, connect the station to a mains power outlet and the recharge process begins. —WIRELESS POWER

DISABLING BARRIERS

“Problems do not go away. They must be worked through or else they remain, forever a barrier to real growth and development”

In order to have a fully inclusive workplace, a work environment must be created that is physically, technologically, and attitudinally accessible.

An accessible workplace will maximize productivity, by eliminating barriers, that can prevent people with disabilities from working to their potential. If you are looking to recruit the best person to fill a job vacancy you may be missing out on talented potential employees because you are not attracting disabled candidates.

The pool of talented disabled people in the UK, for example, is over seven million people or 18 percent of the working-age population. There are a number of aspects of recruitment that may be acting as barriers to you seeing and recruiting

the best disabled and non-disabled candidates. Recruitment is a criterion of the Disability Standard and a key area of becoming a disability-smart organization.

The Americans with Disabilities Act (ADA) is a federal design to remove barriers to employment for qualified individuals with disabilities by prohibiting discrimination in the workplace and is to be applied on a case-by-case basis. The law defines disability as a physical or mental impairment that substantially limits one or more of the major life activities of such individual. In addition, the term disability includes having a record of such an impairment or being regarded as having such an impairment. Consider whether there are steps your company could take to ensure that its facilities and operations are in full compliance with the spirit and letter of the law.

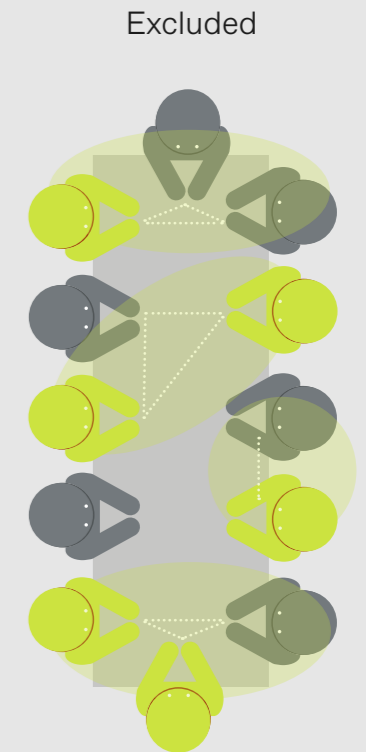

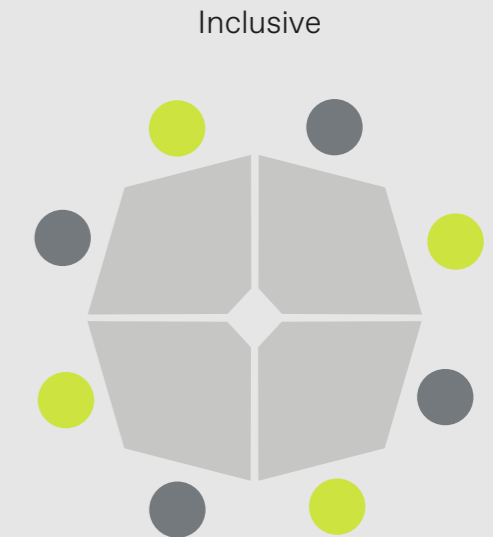

EQUITY & INDIVIDUAL NEEDS

When durable tables of different heights are used, individuals of different heights, body compositions, and abilities can find a comfortable and suitable place to sit and enjoy themselves. Additionally, tables of different shapes, such as circular or rectangular, can encourage conversation and collaboration among people, regardless of their social status, background, or interests.

Our standard Versatilis table shapes provided a clear line of sight between group work participants and can help eliminate barriers for those of us with disabilities such as the following;

- hard of hearing
- impaired vision
- restricted mobility

The ease of use & mobility of Versatilis tables allows for a room to be quickly configured appropriately to meet the needs of any individuals or groups at any given time. Wireless power can be located at a convenient height on the table leg (freeing up space on the work surface) or positioned freestanding wherever required to suit an individual or group.

—CASE STUDY

BELMONT MIDDLE & HIGH SCHOOL —DESIGNED BY PERKINS & WILL

Christina was an absolute Joy to work with and kindly provided the below reference:

“Students at Belmont Middle and High School learn in a progressive environment that takes its design cues from forward-thinking industries. Open areas for collaboration, flexible spaces to meet the needs of changing curricula and mobile workstations for students and teachers - workplace design elements often embraced by innovative tech companies and creative agencies like Google and IDEO—are among a host of options that Perkins&Will explored for ideas on improving the school.

The guitar pick Versatilis table by Muzo was instrumental for our breakout spaces. (Pun intended). This net-zero school by Perkins&Will was designed to allow students to have independent areas where students can interact and collaborate with other students. This type of environment supports different learning styles by allowing students to have additional work and lounge areas outside of the classroom.

Perkins&Will and Muzo worked closely together to ‘right size’ the tables for our spaces. We wanted a fun, unique shape that was able to accommodate 2-3 students per table – while also maintaining inclusive accessibility for disabled users. The Versatilis table with its incredible range of shapes, sizes, and features was able to bring our design vision to life – not only in the breakout areas but the cafeteria, media center, and more!”

About The Future

“Our new school is about the future – we need to prepare students to succeed in an uncertain future by providing them with a dynamic and inspiring learning environment,” says Superintendent John P. Phelan. “Through a flexible learning and teaching environment, we can now support the types of activities that will foster innovation and create lifelong learners.”

Christina Mulligan
Interior Design - Perkins & Will

“The Versatilis table with its incredible range of shapes, sizes, and features was able to bring our design vision to life”.

SAVE MONEY WITH VERSATILIS

REPURPOSE YOUR REAL ESTATE

A room designed for a single purpose often results in inefficient use of space, leading to unnecessary expenses on lighting and heating, regardless of whether it's being used or not. Today's campuses need to be adaptable to multiple possibilities, as the world changes rapidly and we can't accurately predict our future needs. However, we can invest in spaces that recognize the inevitability of change. By examining underutilized real estate, we can maximize its potential with versatile furniture such as the Versatilis tables. These tables can be easily configured to accommodate various learning, conference, meeting, or work styles, effectively unleashing the full power and potential of your real estate.

INSTALLATION

Who needs installers? 4 legs. 8 bolts. Job done!

PERFORMANCE

Workers, students, and teachers alike are more productive when able to focus and be allowed to physically position themselves in a variety of ways that best suit their respective challenges. By presenting more physical opportunities in any space we can draw out and enhance the very best in people.

LONGEVITY

The Versatilis frame system is unrivaled in strength and durability. We offer a 10-year warranty on the frame and a lifetime warranty on the caster!
