

Xbrick® Cleaning & Maintenance

Xbrick is easy to clean and disinfect. It is water-resistant and can also be used in the bath or shower.

- Washable with soap and water
- Can be disinfected with ethanol
- Spray out cavity inside e.g. with a fountain hose
- Do not clean Xbrick with a high-pressure cleaner
- Do not use nitro-based cleaners
- Only use cloths and soft brushes

If an Xbrick has become wet simply leave to dry in this position on a level surface, preferably individually on wooden slats or similar.

The inner ribbed structure has slight slopes towards the grip holes so that liquid can run out of the lower grip hole in this position. If any liquid remains, it can be shaken out of the Xbrick by swiveling it. The same applies to smaller objects that have got into the Xbrick.
