

Flomo

Cleaning & Maintenance

MATERIALS

Writable surface: high quality ceramic on steel

Casing: (Pure EPP) Expanded polypropylene

Back surface: Velour fabric

CLEANING

Writable surface: Use whiteboard cleaner or warm soapy water.

Casing: Warm soapy water with damp cloth or sponge

Back surface: Do not use hot water. Lightly moisten stained area and apply small amount of detergent or shampoo

MAINTENANCE

The ceramic writable surface is hard enough to cut fruit on, but it is not resistant to dents if the Flomo board is dropped onto a hard corner for example. To ensure product lasts a long time it should always be handled with a reasonable amount of care.

When storing Flomo try to ensure the whiteboard is not pressed into sharp objects or corners that could dent the surface.
