

Switch

muzo

Mobile and light yet
strong and durable

The concept is simple, a chair that folds and nests that integrates flawlessly with Kite. Individually, Switch offers unique styling and brings a new level of comfort to the training and educational environment. Carefully designed to support the natural ways humans move when seated, small details ensure a comfortable and functional seating experience.

It is one thing having super-chair that ticks all the boxes, and another having one that ticks all the boxes and can neatly nest together. The flip-seat allows users to neatly store Switch away, which means your workspace is ready to adapt to any changes reality may ask of you.

Switch operates seamlessly with our Kite table system. The mobility of the chairs and tables make it perfect for classroom environments like the one above.

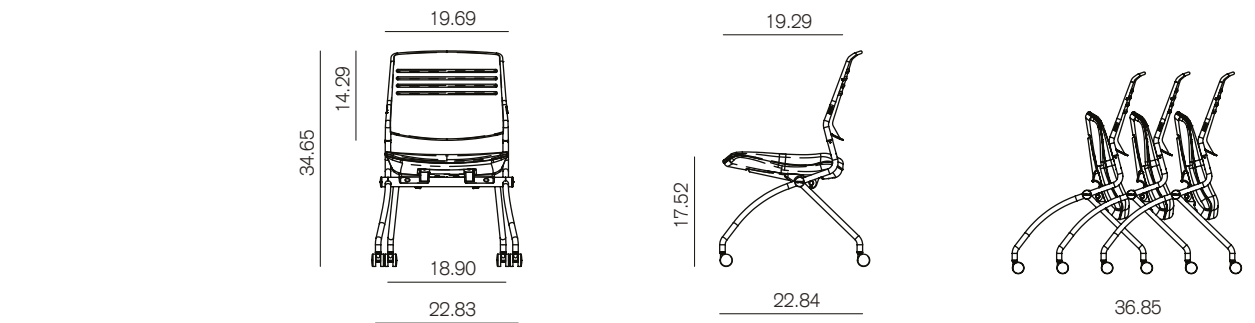

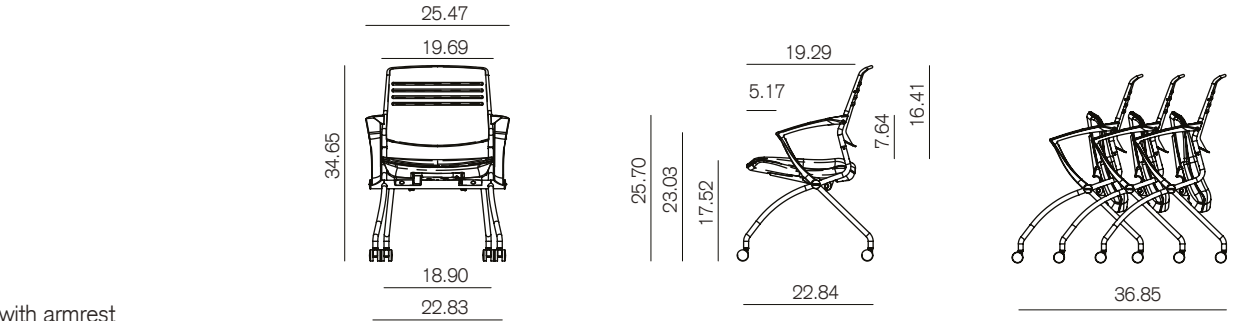

The nesting capability of Switch allows for quick and easy reconfiguring of the working layout. It also stores neatly away to free up space when needed. The lightness of Switch makes it an extremely flexible and mobile chair, there is no need to waste energy with heavy, clunky furniture when you can have strength, comfort, style and mobility without compromise.
